DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 16 – 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 16 line 2 and claim 18 line 2, the word “resolving” is indefinite, because it does not particularly point out the process being applied. The examiner notes that page 23 lines 6+ of the specification discuss “resolving”, but he feels that the claims should provide greater specificity of the process involved in order to provide notice and to properly delineate the boundaries of the invention.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 16 – 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 5,446,685 to Host.

With regard to claim 16, Holst teaches, in figure 3, comparator circuits 34 which are in columnar fashion and are joined by priority lines BL. The "resolving" process is taught in col 3 lines 28+. The match line is de-asserted as described in col 2 lines 33+.

Although it is not explicitly stated that the resolution process and the de-assertion process occur "concurrently", the examiner believes that this would have been obvious to one of ordinary skill in the art at the time of the invention in order to save power and promote synchronization.

With regard to claim 17, note a second column of compare circuits as shown and the process discussed above.

With regard to claims 18 - 19, see the discussion above and note that the means portion in the specification of the current application as claimed correspond to the teachings Host as discussed above.

5. Claims 1 – 15 are allowed.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Blount whose telephone number is 571 - 272 - 3071. The examiner can normally be reached on M-F 9:00 - 5:30.
